

**Title of Event: Mathematical Tambola**

**Organized by: Asankh Mathematics Society**

**Date: 9th January 2020**

**Number of participants: 55**

**Report of the event:**

On 9th January 2020, the society was busy solving equations , problems and using algebra/calculus in only less than a minute to unleash the number on the sheet.

Math-bola aka mathematical tambola was a robust check of the swiftness of the minds. This is a conceptual solve and play tambola games uniquely designed to serve as a game for teaching maths with quality indoor entertainment.

Flooding back the remembrance of friends and family gatherings where Tambola was a must, but with an added flavor of mathematical and technological artistry making it an irresistible matchless combination.

In this event, the participants played tambola but with a mathematical twist. The rules will be the same as that of a normal tambola Game, but instead of calling out the numbers directly, simple mathematical expressions were given to solve.

Everyone enjoyed the game.
