

COVID HELPDESK

As we are amidst the extreme phase of Covid-19 pandemic where the spread has accelerated, Project S.E.V.A is persistently working to provide verified leads to help people find oxygen, hospital, medicines, plasma, ambulance and food services. Patients and their family members are clamouring for oxygen, hospital beds and medications, seeing this S.E.V.A group decided to push their efforts to gather important information about available healthcare resources and post it regularly on their social media handles after verifying it.

The database of the verified leads is being updated regularly. The team tries to respond to all of the queries received as quickly as possible.

The information has been collated by several individuals and is being shared on good faith basis.

This is such a notable initiative started by the S.E.V.A group. The team is also trying to provide verified information on available resources across different states. By amplifying the leads and spreading awareness through social media, the team is able to help many in such hard times.
